Presented by [Property Perfections](#) is the leading natural cleaning products manufacturer in the United States. Our mission is to improve the environment as well as the lives of the entire world by formulating safe solutions to improve air quality and health of our very appreciated customers.

Carpet Rust Stain Removers

Have you ever had to deal with carpet rust stain removal? Better yet, how the heck did your carpet end up getting a orange rust stain on it in the first place? Believe it or not rust can stick to anything and everything. Sometimes you step in a puddle that may have some rust deposits in it and then when you walk in your house you see the art work that you did on the carpet.

Other times, the reason why you may have rust stains in the carpet is because you may have had a leak at one time from a door in your home or a window seal. The water could of dripped right down to the carpet and onto the tiny little nails that hold your carpet in place that outline the baseboards in your home. Go ahead and pick a corner in your home and lift up the carpet and you will see exactly what I mean. Better yet, check the carpet by the door and window area and see if the nails are rusty.

The next question you may have after you find some rust stains in your carpet is how are you going to remove the rust from carpet area? The best thing you need to do is get yourself a natural carpet stain rust remover. When I say natural I mean a good rust remover that uses no acids or bleach to get rid of the rust. You don't want to spray the rust remover on your carpet and then start wiping the stain and notice not only did you remover the stain but the carpet as well. Just imagine, all you men out there, that the wife hounds you to clean the rust stains and then you finally do something about it and finds out you put a hole in the carpet? I bet that couch is going to be your best friend for a couple weeks huh?

Carpet Stain Rust Removal

One of the easiest and safest ways to remove rust from carpet is to go natural. Yes, people are jumping on the "Going Green" band wagon for a reason. They love the safety of using the products but also the safety of not harming the environment. When you are looking for a natural rust remover you should look at the product description section and see if it has phosphoric acid. If it does, you don't want to use it because it will eat up everything that comes in contact with it.

When it comes time to remove rust you don't want to have to worry about it burning your hands or damaging carpet and or the furniture. Natural cleaning products are becoming a way of life for many people. Natural rust removers are becoming a much better choice when it comes to carpet rust stain remover because not only does it get the job done but you done have to worry about them causing more damage than they are worth. There is a reason why people are going all natural, once you do you will see why more and more people are jumping on the "Going Green" bandwagon.

Rust Removal Tips

Rust removal can be a tough task especially if you are not sure of what you are dealing with and what it takes to remove rust

safely and effectively. There are many different ways to remove rust but there are also different types of materials that react different to rust but also the rust removers you are using. The best rust removal advice that I can give is to get as much information about rust removal as you can before you make a mistake that you can't fix.

When it comes to rust removal you have to make sure you know what you are dealing with and also how to remove rust safely. Most people have their own version of rust removal tips that they pass down to their friends but most of the time these tips are just to place some acid on the affected area to clean up the rust. The worst thing you can do is try to remove rust stains but only remove the paint or finish of the surface, that is a not a good thing to do. One of the best rust removal tips to give someone is to stay away from all the acidic rust removers and go with all natural rust removal products.

Phosphoric acid is a strong acid that is used for many different types of rust removers. This acid does remove rust but unfortunately damages the surface that the rust had been on. A long time ago when these acidic rust removers were the weapon of choice against rust people didn't really care about damaging the surfaces just as long as the rust would go away. That is not the case in way people think today. Sometimes jewelry or other sentimental items will develop rust on them. I am sure you are not just going to dump some phosphoric acid on them and hope for the best right? I didn't think so. So here is my rust removal advice for you. Rust Removal

When removing rust from anything including metal and concrete make sure that the rust remover that you are using does not have acid as the main ingredient in it to remove the rust. You can always check on the label to see the ingredients and if it says phosphoric acid then don't use it. There are some rust removers out there that are truly 100% organic and use the natural ingredients that the earth provides us. Just because these rust removers have no acid in them does not mean that they are less powerful, in fact, the natural rust removers are much more powerful than acids because certain ingredients have a stronger reaction to rust which helps them remove rust in a easier way.

Rust removal can be something that can drive you nuts if you don't know what to use to fight your rust problem but if you have the best rust remover as your weapon of choice you can save time and money getting rid of your rust stains quickly and more effectively.

Concrete Rust Removal In A Few Seconds...

Have you recently spotted rust on your cement? It's usually very noticeable and for sure, you'll want to get rid of it. There's nothing more irritating than a spotless home and then out of nowhere, you'll see a menacing rust stain. Well, don't fret; it is easy to get rid of but you have to know a few things first. May I ask; do you know what causes rust? Well, when metal (iron or steel) reacts with good old water, a chemical reaction ensues and the acid that's born out of the interaction between the dust and water on the metal will cause the spread of rust. In short, if your beloved metal is dirty, it is a good candidate for rust.

So make sure that your precious metal items – from silverware to your outdoor furniture – are clean and dry. The first step to the cure is always the prevention. If you prevent the spread of rust in the first place, then you won't have anything to fear.

But what if the rust stain is not on any metal surface but on cement? Well, that's a different issue. And to deal with that, you should read this carefully. First, just make sure that all items in your house are always clean and dry. But if it's your fish tank, don't let it become dry unless you want your fish to die.

When dealing with things like rust stains, it is always best that you prevent it from happening altogether by just making your home clean and dry. An accidental spill on your patio furniture?

Rust Removal From Cement

Clean it up immediately! Don't let Nature do the cleaning by letting your furniture just air dry. But what if it's already too late? You can see the rust slowly but surely eating away and you are already panicking. Well, first things first; don't panic! Rust removal from cement is easier than you may think.

Surely, it can be done. You just have to have patience and some products that will help you win the fight against rust.

They say that rust removal products is downright impossible. Well, it is true that removing rust stains on cement is a bit hard to do and might require a whole lot of patience and an arsenal (make that a garage-full) of products. But we would prove to you that your cement can go back to its former glory and be as pristine as can be. If you want to do it the natural way; you can.

But if you're more of a do or die person and you just want to get rid of it and fast, then maybe you can go to your nearest hardware or supplies store and ask for the strongest, fiercest and the most effective auto rust remover. Don't be surprised if the bottle is riddled with skulls and crossbones signs.

If it's the meanest rust remover in the block, then it's probably very toxic and hazardous to humans (and animals, but most especially to rust).

But if you'd rather treat your rust with a gentler approach, then you can use another safer yet effective rust remover. Do you know what it is?

Well, it's vinegar!

Cane, distilled or apple cider, it doesn't matter!

As long as it's vinegar, it will do the job. Just pour an ample amount of vinegar on the rust stain, let it sit for a few minutes, then scrub away. Vinegar is cheap and easy to use. Plus, you can find it anywhere and you don't have to worry about it being toxic or poisonous. So, there you go! With these products, rust removal is possible and easy. Just remember that when it comes to rust, it is best that you act immediately.

One of the most difficult challenges in life is to try and keep all the different mold types out of your home. Everyone has their own reasons for keeping mold out of the home but there are still so many people out there that don't realize the true dangers of black mold and the permanent black mold health issues it can cause in the future. Black mold health effects can be permanent and can sneak up on you and your family when you least expect it. Black mold removal is hard enough as it is and if you are inexperienced in cleaning mold than you will not prevent mold growth and different mold types from entering your home.

Dangers Of Black Mold

There have been numerous case studies of mold allergy in the United States. Many children who have been exposed to the dangers of black mold have had severe reactions to mold allergy. The families didn't understand why their children kept on crying and complaining of stomach cramps and would not stop coughing. Some toddlers had bad rashes and itchy skin which the parents thought it was eczema. Most of the parents thought it was flu-like symptoms. But little did the family know of the dangers of black mold since they had a large amount of mold growth in their walls and even their carpet where the toddlers played. The good news was that they finally found a reason that the children were always sick because they were exposed to different mold types and had the common black mold health issues.

Black Mold Health Effects

Cleaning mold and participating in black mold removal of the home go hand and hand when dealing with all the different mold types that could enter your home and make you experience these black mold health effects. In order to rid your home of the dangers of black mold you will need to start at the root of the problem which is where the mold growth is most apparent. The mold growth could start in any areas of the home especially where there is higher levels of humidity, moisture, and areas of the home where there is minimal sunlight. The places that would have the highest amount of mold growth and have cause some dangers of black mold would be the bathrooms, basements, closets, kitchen, and even under the carpets. The basement is one of the vacation spots for mold growth and most of the time is where these black mold health issues generate from. If you have a basement and have not checked in a while for mold growth because the summer time is coming and you will find all kinds of mold growth in certain areas.

Cleaning mold and preparing your home to fight the dangers of black mold and black mold health effects will help you have a safer home for you and your family to live in. No one wants to live with the dangers of black mold and no one wants their children

to be exposed to these black mold health issues. Always learn as much as you can about the dangers of black mold and black mold removal so that cleaning mold and eliminating mold growth in your home will be as easy as throwing away black mold on bread.

Mold Cleaning can be a difficult task if you are unsure of what kind of mold killing products you will need to use to get rid of your mold and mildew problem. Finding the best mold removal products can help you save time and also protect you and your family from many different types of black mold health issues and other dangers of black mold that you and your family can be exposed to. Most people do not realize they have black mold growing in their home and have no idea of keeping black mold from entering the home or what type of mold removal products to use once it has entered the place where you live.

Mold Killing Products

There are many different ways to see if you have black mold growing in your home. Black mold loves to grow in places of the home that are damp, dark, and have a minimal amount of sunlight. If your house has high amounts of humidity levels then you almost guaranteed to have black mold growth in the home. What are the most common places for mold to grow?

The most common places that will have the most abundance of mold growth would be the following areas:

1. Bathrooms
2. Showers
3. Closets
4. Attucks
5. Laundry room
6. Basements

Make sure to check all those areas for black mold but make sure you also pay extra attention to the basement areas. The basement is like a vacation home for black mold spores because it provides the mold spores with the best living conditions to help them reproduce very rapidly. Mold grows in the bathroom and shower areas but these areas are used more by us humans and are likely to get cleaned more often than the basements. Closets are places where no one even thinks to check but the closet areas can be a huge breeding ground for black mold.

How to kill black mold?

One of the most efficient ways to use when it comes to black mold removal is to go natural. There are natural mold killing products that will remove mold and mildew but will also prevent it from returning. These natural mold removal products sanitize the areas where the black mold spores grow but also encapsulate the mold spores to keep them from returning. When we say encapsulate, we mean that these natural mold killing products deprive the mold from any nutrients they need to survive. Pretend if you will an invisible shield over your showers and sinks in the bathroom. Then picture a mold spore trying to attach itself to grow on your shower tile or sink areas but it can't because those areas are encapsulated to prevent mold growth. It's just that simple, you deprive the mold spores of nutrients and they either die or find another place to live.

Remember when determining if you have a black mold problem to also make sure that you are using the necessary resources to remove black mold easily and effectively. Natural mold removal products are the way to go and you will never have to worry about using these natural mold killing products in the presence of other family members including your pets. If you are worried that you may have mold problem then you already do.

What Is Black Mold?

Frankly black mold is a living organism much like you. The difference this is a minute organism that you will not see until it becomes a problem.

In the world of mold and mildew, it is clear that these organisms will need two important factors to continue growing. (Hint: Pay

attention, because you take these away and you will get rid of toxic black mold).

- Food Source - The organisms will grow upon material in which they can eat. Many of these food sources are drywall, wood, and carpeting, etc.
- Environment For Amplification - Black mold will like locations in which there is moisture and high humidity. While there are different types of molds they all will need a comfortable location to amplify. This does not necessarily mean a warm place. Toxic black mold can grow in cold, dry, and humid location places as well.

What Is Black Mold Made Up Of?

Since black mold is a living organism like you. It has parts that make up the spore as a whole. The mold is a cellular organism and what actually spreads toxic mold increasing faster is when the organism dries. Once the organism dries up there are cellular legs of the spore that are similar to a dandelion flower. These sit on the exterior of the organism and are called Hyphae. The Hyphae is like a nest for the mold and mildew and when the spore dries up, these Hyphae little legs begin to dry.

That is how the toxic black mold spreads.

When the black mold spore dries up, this is when the organism begins to spread like a dandelion flower in the wind. The Hyphae legs rip off the delicate spore and then attach somewhere a few centimeters down the way from the original source.

So you see, the mold spore is made up of a cell, but there are Hyphae and this is what causes problem from the black mold. The simple fact that you see spores and these pesky organisms on grow and spread everywhere is because of the two factors above (Food Source & Environment), but the real problem is the Hyphae. When these little items from the toxic mold dries and dies the Hyphae by nature breaks away and spreads to grow somewhere else.

What Makes Black Mold Toxic?

There are dozens of symptoms that are cause from toxic black mold. While you may believe black mold is the culprit, there are tons of different species of toxic black mold. The toxicity comes from the spore itself, if you read above these organisms are alive like you. So like any living organism, once you eat sooner or later you will need to get full and need to relieve your self.

Toxic Mold Does Not Have Any Manners...

You will be polite and of course are more advanced as a living being, but the toxic molds are simple organisms that did not have a mother teaching them how to politely excuse themselves and go to the outhouse to relieve them selves.

You see, these organisms simply relieve themselves and the defecation is the source of your black mold symptoms. When you see tons of the black molds, it can be any one of the many type of black mold species. Which ever it is, it will always defecate and will in fact make you or your loved ones sick. This is the single biggest cause of mold symptoms, when the toxic black mold defecates the organisms feces will actually be liberated into the air.

Read more at [Property Perfections](#)

Dealing with mildew and black mold has been quite a challenge for some time. The main reason because mold grows so fast and in areas where most do not notice. Place like black mold in a crawl space, inner wall cavity and many others. The spores of toxic mold have been around since day one. The good news is it can be removed and prevented if done correctly and your home, or office is maintained.

What most home people who suffer black mold allergens should know is that mold becomes a problem when the indoor spore count is higher than the outside spore count. Black Mold Count is usually identified scientifically from a mold test by a professional or a easy way is to understand if there is visible black mold in the room and it appears to be noticeable, you may have a problem. So when living in a confined space, such as your home or bedroom, the area needs a certain percentage of clean breathing air.

Natural Cleaning Products

When you begin having black mold spores over populate the air that is when the area becomes a problem and most likely you may have a black mold problem. Removing black mold can become an expensive process if mold has grown and amplified in your house or office over a long period of time.

What is recommended is to find the source and remove the problem with Molderizer an all natural cleaning product and then protect the area with Safe Shield our black mold cleaner and mildew blocker.

Protect and keep your sources Dry free from water and high humidity:

Mold needs three conditions to grow and become a problem in the home. The first is Food, Black mold requires a food source to grow and amplify. The second source black mold will need is the right temperature.

Black Mold can grow at different temperatures and populate, but having a higher humidity is a big problem and are more likely to have the toxic mold, some of the most toxic molds grow in warm wet locations.

Such mold as Aspergillus, and Stachybotrys, these molds can have many toxic effects that come from their mycotoxins causing popular mold symptoms. These mycotoxins are excrement from the mold when it sits and eats off your food source.

Remove the Food Source or Encapsulate It:

If you had an area that was really wet such as drywall, it is recommended to remove that drywall. This seems to be a common case with homes, the back of the drywall since no one can see it will have tons of mold spores in the cavity. This wall cavity is dark, warm, and at time is the first to have moisture damage because it will be the closest to the exterior wall.

You can begin noticing black spots around the plug outlets and other areas as a good indicator. This toxic black mold growth can become a huge problem as it will eat the drywall and then damage the structure. The moldy wet drywall becomes soft and easy incubator for more mold to grow.

Black Mold Can Also Grow In Clean Environments

Most people recognize mold as slimy, green discoloration found on carpeting, drywall, baseboards or even wallpaper that gradually increases in size, but found only in dirty, unkempt homes or apartments. But the truth is, mold and spores can flourish in sparkling clean environments as well.

Mold can be present in any room, nook or cranny, and destroys indiscriminately. Any time mold is discovered, it should be treated immediately. Whether toxic or mildly allergenic, whether dead or alive, mold can have harmful effects on people and their property. Black Mold will grow in area where it can reproduce and this means in your home. It is important to not overlook black mold and mildew and always have a method of prevention to cause more problems in the future.

Black Mold Removal from Drywall?

There are numerous reasons to remove and prevent mold in your home and on it's surfaces of your furniture and drywall. First of all, it is important to understand mold is everywhere. There is no escaping it, but there is preventing it from being a problem. Though mold is not a problem normally, when indoor mold exceeds levels typically found outdoors, a number of serious problems can occur to one's home and health.

Mold Symptoms can occur and damage the house. Whether your house has a bit of mold in the normal shower areas or tub, you should have the correct solution to prevent the mold growth from occurring even further. More importantly if you visible see mold on your walls or other parts of your home, you should definitely look into investing into an all natural mold cleaning solution such as safe shield.

Fastest and Most Affordable Solution to removing black mold is our all natural Safe Shield mold cleaning solution and blocker. If

you or someone you know has visible mold inside their home, it is best to use an all natural solution that changes the DNA of mold that destroys it and prevents the surface area from having any mold amplification in the future.

Health Issues from Toxic Mold spores:

This should be the number one concern of anyone who has a potential mold problem and the primary reason for having a mold solution to remove and prevent it from occurring again. Every day we seem to learn more about mold and its health ramifications. Some people experience extreme reactions to mold, while others can live in moldy environments for years while others Every individual has a different sensitivity to mold and longer term exposure to mold contamination can lead to permanent chronic health respiratory issues.

There are hundreds of thousands of mold types.

Approximately 40 known variations of mold are common to indoor environments, and they cause a myriad of health risks, such as: allergy attacks, arthritic aching, asthma, bloody nose, bronchitis, coughing, chronic head-aches, depression, dizziness, fatigue, hearing, loss of memory, nausea, pneumonia, restlessness, runny nose, sight, sinus congestion, skin itch, skin rashes, sneezing, trouble breathing, watery eyes, stiffness, balance or equilibrium loss.

If you believe you or your loved ones are experiencing these symptoms and you're concerned about mold, you need a mold inspection in addition to our product to assess the Health Problems of Black Mold. Below you will find some of our trusted Mold Inspectors who we recommend.

Often you do find some black and wired spot on the surface of the wall and on the damp portion of the wet basement. If they are overlooked, they would be the misery of your side. Mold and Mildew have become the continuous threat for the modern people. The continuous growth of the molds has set the alert for the damp walls, basements and the toilets.

Mold and Mildew

Mold is a common term used to describe a furry growth on the surface of organic matter, caused by fungi, especially in the presence of dampness and decay. Since most all mold reproduces with a combination of dampness and darkness, the first thing you should do is begin drying out your home. A fungus (pl. fungi) may be any of a large number of microorganisms that are parasites feeding on living organisms or dead organic matter. This can be done with a dehumidifier unit that you can purchase from most home supply stores, many discount and department stores, or at many online retailers. Mold and fungus release spores which are their way of reproducing. These spores float around in the air and pose inhalation or respiratory risks to those living in the local environment. In fact, these spores are considered to be a major allergen and rank with pollen as a main source of contaminants for allergy sufferers.

Molds are of several kinds across the world among all the molds there is very toxic "mycotoxins" and poisonous. The toxic mold is known as Black Mold. This black mold is known as *Stachybotrys Chartarum* (*Stachybotrys atra*). These molds are the main reason for giving the premises a dirt look. People are always on alert from this mold as they are highly dangerous. They can cause allergic reaction, irritation and respiratory problem. The black mold can lead to the death at any circumstances.

Basement Mold

The main reason for the mold and mildew grow is the dampness and the lack of fresh air in the confined areas like basements and crawl spaces. Being affected by the basement mold and crawl spaces mold, the people can get sick easily for walking through the confined area.

Killing Deadly Black Mold

Like outside of the living premises, it can grow in the living areas as well. Where the environment is conducive like shady and damp, that would be perfect place for the mold to pop up. More likely is the scenario where mold problems are stemming from sources like attics, wall voids or crawl spaces which have high moisture and mold growth. Killing deadly black mold is likely to stay away from the nasal and health problem with the help of natural remedies. That will also ensure hygienic atmosphere in the

living areas.

This solution is commercial strength and used for larger areas thus it is sold in 5 gallons.

Learn How To Kill Mold In Showers

In your shower is where you will find the largest mold problem. As you take a shower you inhale the mold spores and this may increase mold symptoms and create problems later on. The problem that most of us have when we kill the mold in shower, we actually will see it come back in a few weeks. This is a large factor of why we start feeling symptoms of black mold and mildew. Let me explain...

Inhaling Black Mold in Showers

Most people will take showers on a daily basis, the problem is if you have black mold and other mold spores growing on the tile and grout not only will your shower look horrible, you are actually entering into a infected area that is similar to a petri dish in a science lab. You see when inhaling and breathing in black mold over long periods of time you actually, if susceptible to mold and mildew will become sick and start feeling symptoms. What you need to know is one thing...

Do not allow you and your family to live around mold if anyone is allergenic, asthmatic, an infant, or elderly. These are prime candidates for mold sickness and symptoms. This is a story which should put it into perspective for you. It is actually about a

mold inspector. What you might read may surprise you.

The True Story Of The Mold Inspector And An Almost Fatal Mistake

In Florida, there was a mold inspector who which would inspect homes and some of the worst scenarios of mold you could imagine. He was great at his job, but sometimes to great where he would love to get in and get dirty and not use proper equipment. Keep in mind a mold inspector has more exposure to mold than you and I, but over time it adds up. Well, this mold inspector was starting to have some issues with his health. But since he loved his job and what he did, nothing would of kept him out of the field. This ignorance actually hurt him.

"To make a long story short, and this is true this mold inspector had a severe stroke..."

No one knew from what, but what the doctors did find out was there were spores of mold in his blood stream. He is okay now, but the purpose of the story is mold adds up and when he had this stroke he was in his bathroom. This may be just a freak accident, but there was mold and mildew in his shower and why he was to busy cleaning mold problems from his customers homes, he forgot to check his own.

The Only Solution Is Organic And Prevention

In most cases, black mold problems are dealt with harsh chemicals and acids, this could be the worst thing you could do to yourself. Black mold needs to properly removed by finding the source of the problem, cleaning it correctly, then preventing it from coming back. So to understand how to kill mold in showers you need the following.

- Find the source of the problem - Most likely the humidity is high in the shower as most are and be sure to have a fan. This will decrease moisture and lower humidity. Also, you surfaces are the problem, such as tile, grout, and other porcelain. These usually have the mold grow on the surface. This is where you will need to use an encapsulate to clean and protect the mold and mildew.
- Clean the Areas - To clean the mold you need to use a natural cleaning product for black mold and mildew, but also you will need to break apart the surface area, if on wood or grout, you need to scrub or wire brush the area after using a natural mold cleaning product spray.
- Prevent the Mold From Coming Back - The main problem with shower mold is that it continues to come back. This is because you are not encapsulating the surface. By placing the mold and mildew in somewhat of a bubble or "Encapsulating" it, you are protecting your surfaces in the shower. This is what Molderizer and Safe Shield do and are specifically designed to clean and prevent shower mold.

Do not allow mold and mildew to grow in your shower. Shower mold and mildew can amplify quite quickly and the longer you allow it to settle the more it grows. Try your hand at natural cleaning products developed specifically for shower mold and preventing shower mold from coming back.

How To Kill Carpet Mold

In any mold situation especially carpeting, it is important to investigate the area before trying to kill the carpeting mold. In most situations, you may kill carpet mold but not the source of the problem..."

To kill carpet mold you will need to investigate the area first. Identify if there are moisture stains and if you will need to remove the entire carpeting or use a natural cleaning solution to kill black mold and mildew stains.

To kill carpet mold you will need to remove the source of the food for the mold, which is the fibers in the carpeting. The carpeting fibers can carry dirt and will be a prime source of food for the black mold spores. To remove these stains and prevent the mold from coming back you need to attack the source of the problem or any prior leaks that has caused the moisture staining on the carpet.

After Finding The Source Now To Get Started Removing Carpet Mold

After you have completed finding and attacking the source, you will need to remove the stains and spores in the carpeting. To do this you will need a natural cleaning product that can remove and change the DNA makeup of the mold and mildew on the carpeting without staining your entire carpeting. Also, it will need to be a cleaning solution that can prevent mold from coming back. This perfect solution to remove mold and then prevent it from coming back is called Safe Shield™.

The solution can prevent mold from growing back due to the clear barrier which is also referred to as encapsulation. Since most encapsulants are paint, this liquid solution is perfect for cleaning carpeting and killing mold on carpets.

If there is a large amount of moisture and the carpet has a heavy musty odor, it is usually due to the entire carpeting being covered with mold. In this case you will need to do a complete mold remediation of the carpet area. Also removing and remembering to remove the tack strips below the carpeting as they would be stained with moisture and mold as well.

Be sure to bag up and seal any contents that may have mold. Then dispose them correctly, by taping the bag you will not liberate any free flying spores.

In any case you will either need a natural cleaning product that is safe to use indoors or follow correct mold remediation guidelines.

In Summary On How To Kill Carpet Mold

- Inspect the carpeting to see the damage
- Find the source of the problem and correct it first
- Locate the mold in the carpeting and either remove or use natural cleaning product.
- Seal up the area and A/C vents to not liberate any spores. Use vis queen to prevent mold spores to travel into other area of the house.
- If removing carpeting then remove carpet 5 feet last visible trace of moisture of mold, also remove tack strips below the carpeting as they will have mold and mildew as well.
- If not removing carpeting, then use natural cleaning product that will remove mold spores but will also prevent the mold from ever coming back by creating a clear barrier. This barrier is known as a encapsulate. Since you are not encapsulating a wall, paint will not do the trick so a liquid solution like Safe Shield™ is recommend or some other natural cleaning product that can remove and block future mold growth.
- Spray down area of mold stains and absorb/wipe down problematic areas, repeat to create a clear barrier on the carpeting
- After spraying down or removing the carpeting, use a air heppa filter to catch all the liberated spores in the room.
- Repeat using natural cleaning product for mold and mildew if needed, but be sure to use mold cleaning product that will clean and protect future growth.
